Description

Hello,

My goal is to propagate the deletion of an issue to change a custom field of the linked issue. So, I intercept the destruction of an issue.

I am encountering a problem with my script. During the destruction of an issue, I am unable to access the issue's relations.

Is this a known and unsolvable problem due to the framework's architecture, or am I just handling it very poorly?

Thank you in advance for your help.
