Redmine - Defect #3010

Settings name field too short for some plugins (30 characters)

2009-03-19 00:55 - Eric Davis

Status:	Closed	**Start date:**	2009-03-19
Priority:	High	**Due date:**

Category:	Database	**Estimated time:**	0.00 hour
Target version:	0.9.0		
Resolution:	Fixed	**Affected version:**	

Description

The settings.name field is current set to only allow 30 characters. This can cause problems with plugins since "plugin_" is appended to the plugin name by Settings and the plugin generator prefixs plugins with "redmine". That only leaves 16 characters for the plugin name. Since Redmine doesn't check that a plugin name is under 16 characters, I propose extending the field to 255.

Associated revisions

Revision 2599 - 2009-03-19 01:01 - Eric Davis

Extend the settings.name column so it can fit longer plugin names.

`#3010`

History

#1 - 2009-03-19 00:58 - Eric Davis

- Status changed from New to Closed

- Target version set to 0.9.0

- % Done changed from 0 to 100

- Affected version (unused) set to devel

- Resolution set to Fixed

Fixed in r2599. Should be released in 0.9 due to the database schema change.

#2 - 2009-03-19 01:04 - Eric Davis

- File 20090318181151_extend_settings_name.rb added

I'm attaching the migration here for anyone on 0.8.x that is affected. Nothing special will need to be done when upgrading to 0.9.0, Redmine will skip this migration if it's already been applied.

Steps:

1. Backup your database, just in case
2. Download the file to your redmine_directory/db/migrate/ directory
3. Run RAILS_ENV=production rake db:migrate
