Description

I was looking through the roles/permission section and there is not an option to restrict the selection or update of the target version field.

This is an option we need in order to prevent users who are not project managers from sticking issues into the road map.

I second this. The ability to restrict certain fields to certain user types would be invaluable... esp. when dealing with the target version.

The combination of #703 (available under version 2.1.0) and #12005 (planned) together will solve this.
