

Redmine - Defect #2638

LDAP authentication should allow username to contain space(s)

2009-02-01 00:19 - Bob Roberts

Status:	New	Start date:	2009-02-01
Priority:	Normal	Due date:	
Assignee:		% Done:	0%
Category:	LDAP	Estimated time:	0.00 hour
Target version:	Candidate for next minor release	Affected version:	
Resolution:			
Description			
<p>It is not uncommon for Windows AD servers to allow spaces in the user name (sAMAccountName) but currently redmine does not allow the user name to contain 1 or more spaces which means that when using LDAP to authenticate, it is not possible to use sAMAccountName to lookup users.</p> <p>If there is not a technical reason for this limitation, would suggest the the regex scan for the user name allow spaces in the middle of user names, but not at the start or end.</p> <p>See patch #811 supporting this change.</p>

any plans for it ?

#2 - 2011-09-13 14:31 - Etienne Massip

- *Category changed from Accounts / authentication to LDAP*

#3 - 2011-09-13 14:32 - Etienne Massip

- *Target version set to Candidate for next minor release*

#4 - 2012-06-25 10:28 - Antoine Rodriguez

It's more an Issue. AD usernames with space cannot authenticate with Active Directory.

Confirmed on Redmine 2.0.1

Best regards,
