Redmine - Feature #19226

Add ability to display diff directly in comment

2015-03-01 08:02 - Deoren Moor

Description

For example, right now we're able to write r12345 and Redmine will parse it and display a link to the revision or changeset. However, it would be useful to be able to use specific syntax to have Redmine display the diff directly in the comment.

Existing format:

400
or as CodeRay would display it:

```
Index: field_format.rb
===================================================================
--- field_format.rb    (revision 12344)
+++ field_format.rb    (revision 12345)
@@ -315,7 +315,7 @@
       end

       def edit_tag(view, tag_id, tag_name, custom_value, options={})
-        view.hidden_field_tag(tag_name, '0') +
+        view.hidden_field_tag(tag_name, '0', :id => nil) +
           view.check_box_tag(tag_name, '1', custom_value.true?, options.merge(:id => tag_id))
       end
```

Thanks for your consideration!

Not sure what happened in the OP. Bad copy/paste I guess.
