Redmine - Patch #3008

Wrong height of content container on My Page

2009-03-18 23:49 - Uwe Koloska

Status:	Closed	**Start date:**	2009-03-18

Target version:			

Description

Because the two columns of My Page are both configured as float in the CSS, the height of the surrounding is not calculated correctly and in the default theme and all themes derived from it, given by the min-height. The effect can be seen in the attached screenshot: MyPage.png.

The attached path solves this by adding a with a float clear:both style and was made against the current r2598 of the 0.8-stable branch.

- File mypage_clearfloat2.diff added

Ah, yes, a very good point. And even better the link this site points to: Simple Clearing of Floats This leads to a very nice solution. Thank you!

I hope that public/stylesheets/application.css is the right place for this CSS magic.
