

## Redmine - Feature #1233

### change default homepage to My page

2008-05-13 18:36 - Robert Cerny

<b>Status:</b>	New	<b>Start date:</b>	2008-05-13
<b>Priority:</b>	Normal	<b>Due date:</b>

<b>Category:</b>	UI	<b>Estimated time:</b>	0.00 hour
<b>Target version:</b>	Candidate for next major release		
<b>Resolution:</b>			
<b>Description</b>			
I would like to get a preference to set homepage to another page. My page is preferred, popup button with more options (MyPage, Wiki, Selected Project...) would be better

### History

#### #1 - 2009-03-17 17:01 - Matt Meng

+1

This is something I've been hoping to see for quite some time. It would be great if it were a per-user based choice, so that one user could select "My Page" as default while another decides upon "Wiki".

#### #2 - 2009-03-30 15:56 - David P

+1

The ability to choose a project->roadmap or version as the default view would be nice.

#### #3 - 2009-08-24 00:25 - Noname Noname

+1 here, if we could have it so we could set an overall home page for the site i.e. the issues page

#### #4 - 2010-02-13 14:47 - Robert Gruendler

+1 optionally setting default homepage to "my page" would be great.

ie. we don't use "news" a lot in our projects, so the default homepage doesn't show any recent information at all, hence you click it away in 99% of the cases.

#### #5 - 2010-09-24 13:53 - Sebastian M.

#### #6 - 2010-11-26 11:49 - Sebastian M.

Here's how to change it manually:

Edit `config/routes.rb`

Change

```
map.home '', :controller => 'welcome'
```

to

```
map.home '', :controller => 'my', :action => 'page'
```

**#7 - 2011-02-01 15:36 - James Stewart**

Another way of doing this, is to create a new Redmine plugin, and modify <plugin>/config/routes.rb. I do this mainly to keep from having to modify Redmine core files, making upgrades and testing simpler.

```
map.home '', :controller => 'my'
```

I removed the *page* action because it causes rake test to fail, and looking at the My controller, *page* is defined in the index method.

```
RAILS_ENV=test rake test
```

+1

Would it be possible, while we wait, for someone to produce a plugin we could use. Perhaps also with an easy configuration option of choosing what page/project-page to choose?

**#11 - 2011-06-30 18:11 - Hisham Al-Shurafa**

+1 My page has better info than 'Home'. I already went ahead and changed it for my team by editing config/routes.rb

**#12 - 2011-08-10 16:42 - André Bachmann**

I'm wondering what exactly has to be in config/routes.rb so that the user is automatically redirected to the wiki page of a project? I want the exact behaviour of [www.redmine.org](http://www.redmine.org), where the user is guided to the wiki of the project automatically.

Who can give a hint?

**#13 - 2011-10-19 16:47 - side2k .**

Here it is:

```
map.home '', :project_id => 'myproject', :action => 'show', :controller => 'wiki'
```

Of course, you should put your project name instead of *myproject*

**#14 - 2012-05-05 14:58 - Uwe Koloska**

Maybe this plugin will do what you want: [Landing Page](#)

**#15 - 2012-05-09 07:03 - Makoto NAKAYA**

- File adds\_default\_page.patch added

Hello,

I made the patch from branch "master". This patch works on 1.4.1 stable.

It adds column "default\_page" and "default\_project\_id" to table "users".

"default\_page" means what should be loaded after logined.

"default\_project\_id" means user's default project. But it can be selected from projects that are joined by user.

There is no test code because I don't know how to write tests....

Regards

**#17 - 2012-09-04 19:21 - Kevin Cloutier**

What would be added to routes.rb to land the users on 'view all issues' and optionally with a selected saved query?

**#18 - 2012-09-19 18:59 - Den Iskandarov**

How to make default page as:

Home -> Projects -> [View all issues](#) ?

Redmine 2.1.0

**#19 - 2012-09-27 06:33 - Sunny Jaiwal**

I was able to successfully change the home page in Redmine 2.1.0 by changing the following statement in /config/routes.rb from

```
root :to => 'welcome#index', :as => 'home'
```

to

```
root :to => 'reports#issue_report', :id => 'myproject', :as => 'home'
```

where "myproject" is the project identifier.

Thanks. Added relation.

**#24 - 2013-03-18 04:43 - Dipan Mehta**

You can do exactly the same thing using [Redmine Start Page plugin](#)

Install, and config [ controller= my , action = page ]

**#25 - 2013-07-12 04:43 - David Muir**

Redmine Start Page plugin says:

Compatible with: Redmine 1.2.x

Not really a viable solution if it's not available for the 2.x branch.

**#26 - 2013-10-22 20:02 - Branden Strickland**

If you follow to the Github page you'll see that it's usable for 2.x - They just didn't update the plugin page.

```
root :to => 'reports#issue_report', :id => 'myproject', :as => 'home'
```

where "myproject" is the project identifier.

How can I set it to /redmine/projects/myproject/issues

Please help

**#30 - 2015-01-29 02:11 - Nathan Eddle**

```
root :to => 'reports#issue_report', :id => 'myproject', :as => 'home'
```

where myproject is the project identifier.

How can I set it to /redmine/projects/myproject/issues

You can use issues#index.

For the activity page, it's activities#index.

And.. the one I was looking for is the overview page for a project: projects#show. This works with one project for all users.

**#31 - 2016-02-11 19:29 - Danilo Muñoz**

For a while, and working around, I changed the config/routes.rb:

```
root :to => redirect('relative URL')
```

**#32 - 2016-04-05 19:47 - David Raid**

Bonjour,

My browser shortcut to Redmine points to <http://myserver/my/page>, and I land on "My page" after login.

You can use whatever Redmine URL you want in your browser shortcuts, it seems that you land on the specified page after login.

The feature will provide a single landing page, where browser shortcuts will provide as many as landing pages you want.

It's up to each user to choose his shortcuts to land on his favorite pages.

David

**#33 - 2016-08-23 12:45 - Alex Kanogin**

I changed the config/routes.rb:  
from:  

```
root :to => 'welcome#index', :as => 'home'
```

to:  

```
root :to => 'my#page', :as => 'home'
```

Work at redmine version 3.3.0.  
After login at domain name, browser open /my/page.

**#34 - 2017-10-20 09:56 - Marshall Hoang**

```

Work at redmine version 3.3.0.  
After login at domain name, browser open /my/page.

So what'll you do when Redmine updates core?

**#35 - 2018-05-11 10:20 - Milo H**

Did it worked at redmine version 3.4.5?

**#36 - 2018-05-14 05:43 - Gokul NK**

Milo H wrote:

Did it worked at redmine version 3.4.5?

It is just Ruby on Rails based routing. So this hack should I deally work in all the versions. I can confirm that it worked on 3.4.3.stable.17157

**#37 - 2018-05-14 06:21 - Gokul NK**

After making the change you will need to add

```
# Just add this below 'root :to=> ...' line
match '/', :to => 'welcome#index', via: :all
```

For more details you can follow <http://www.redmine.org/issues/11284>

**#38 - 2020-03-28 13:57 - Nikaola Piterskii**

Any chance of adding this functionality?

**#39 - 2020-08-03 11:57 - Stefan Lindner**
