

Redmine - Patch #30071

Show parent projects when filtering in the project jump box

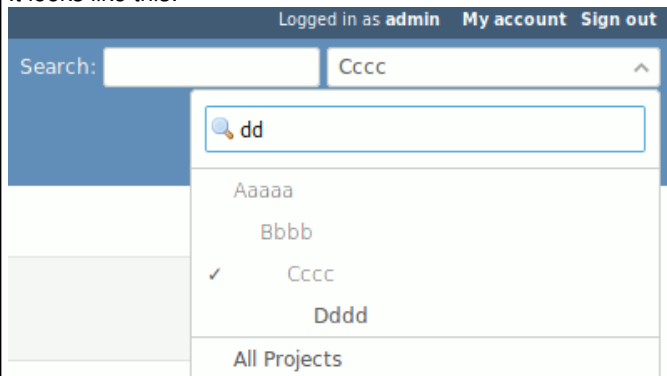

2018-12-01 17:22 - Anders Thomsen

Status:	New	Start date:	
Priority:	Normal	Due date:	
Assignee:		% Done:	0%
Category:	UI	Estimated time:	0.00 hour
Target version:	Candidate for next major release		

Description

Attached patch returns parents projects to matched projects when filtering in the project jump box (improves [#23310](#))

It looks like this:

This solves a problem when having several projects with identical or similar names and project hierarchy is used to distinguish between them. E.g. when using one parent project as a container for business projects and another for the software development part of same project.

Also included is a related patch that marks the current project.

History

#1 - 2018-12-03 09:27 - Go MAEDA

- Status changed from New to Needs feedback

It is an interesting improvement.

I tried out the patch. But parent projects were displayed in not grey but black. And the checkmark for the current project was not displayed even after applying the patch 0002-Mark-current-project-when-filtering-project-jump-box.patch.

Could you check the patch again? My browsers are Firefox and Chrome for Mac.

#2 - 2018-12-03 18:10 - Anders Thomsen

- File 0003-Mark-nodes-with-matching-child-in-filtered-project-j.patch added

The original patch uses on font-weight to grey out the non-matched parent nodes. This relies on the used font to provide the font-style which often it does not. Just realised this as I tested on Windows.

Supplied patch uses "color" instead.

As for not marking the currently selected project, I'm not sure what causes this. I have just copied the functionality from the existing logic that marks the current project on the first page load (i.e. not filtering). Does that work for you?

#3 - 2018-12-30 06:25 - Go MAEDA

- Status changed from Needs feedback to New

- Target version set to 4.1.0

LGTM. Setting the target version to 4.1.0.

#4 - 2018-12-30 08:10 - Marius BĂLTEANU

I like the idea of the patch, but I'm worried about the proposed implementation that retrieves every time all the projects visible to the user (ignoring the q parameter). That means more time required to return the project searched by the user on instances with a lot of projects.

The change about I speak is the following one:

```
diff --git a/app/controllers/projects_controller.rb b/app/controllers/projects_controller.rb
index a43038a..9fbddf2 100644
--- a/app/controllers/projects_controller.rb
+++ b/app/controllers/projects_controller.rb
@@ -66,10 +66,14 @@ class ProjectsController < ApplicationController
   respond_to do |format|
     format.js {
       if params[:q].present?
-         @projects = Project.visible.like(params[:q]).to_a
+         @projects = Project.visible.to_a
       else
         @projects = User.current.projects.to_a
       end
     }
   end
end
```

Maybe is it enough to show only the parent project? If not, at least we should confirm the proposed change with Jean-Philippe.

#5 - 2019-06-20 18:43 - Jean-Philippe Lang

- Target version changed from 4.1.0 to Candidate for next major release
