

Redmine - Patch #40210

Remove overrides that inserts a non-breaking space (nbsp) to empty option elements

2024-02-08 08:05 - Mizuki ISHIKAWA

Status:	Closed	Start date:	
Priority:	Normal	Due date:	
Assignee:	Marius BĂLTEANU	% Done:	0%
Category:	Code cleanup/refactoring	Estimated time:	0.00 hour
Target version:	6.0.0		
Description <p>In Redmine forms, a problem occurs where the "blank" option does not appear in select box fields (e.g., Version or Category). The blank option is visible when the default value is blank, such as in the new issue form. However, if a non-blank value is selected, saved, and then the edit issue form is reloaded, the blank option is missing from the select box.</p> <p>Example 1: After changing the category value from blank to another value and registering the issue, when you attempt to change the category back to blank in the edit form, the blank option is missing from the category select box.</p> <p>Example 2: Similarly, when creating a new issue with a default version set in the project settings, if you try to set the version back to blank, the blank option is missing from the version select box.</p> <p>Despite the f.selectbox being configured with include_blank: true, it does not seem to function properly. This issue does not occur in the Redmine 5.1-stable version and is observed only in the trunk version.</p>

It appears to be affected by the changes made to config/initializers/10-patches.rb in [r22488](https://github.com/redmine/redmine/commit/7b911245d31509da8fa656bbedc37213d3148897?diff=unified&w=0#diff-3df1b8f50fcd1f2cef72d0bae0d030cc1c5dad45c63acbd1722b4c6fa98c7f6R55-L83) (<https://github.com/redmine/redmine/commit/7b911245d31509da8fa656bbedc37213d3148897?diff=unified&w=0#diff-3df1b8f50fcd1f2cef72d0bae0d030cc1c5dad45c63acbd1722b4c6fa98c7f6R55-L83>).

The problem can be fixed by making the following change.

```
diff --git a/config/initializers/10-patches.rb b/config/initializers/10-patches.rb

I am beginning to question the necessity of the code that inserts a non-breaking space (nbsp) to empty option elements.

The code was added in [r12237](#). The purpose of the change was to fix HTML5 validation failures pointed out in [#15191](#). However, I have not found any evidence that empty option elements violate HTML5 standards.

I tested the following HTML, which contains an empty option element (<option value="" label="">), using the [Nu Html Checker](#) by W3C and the test passed without any errors.

```
<!DOCTYPE html>
<html lang="en">
<head>
<title>test</title>
</head>
<body>
<select name="issue[category_id]" id="issue_category_id"><option value="" label=""></option>
<option selected="selected" value="1">Printing</option>
<option value="2">Recipes</option></select>
</body>
</html>
```

Additionally, I checked the [MDN documentation](#) and still could not find any mention of an empty option element being prohibited.

I believe the Rails team should have improved the form helper to insert nbsp when :include_blank is passed if it violates HTML5 standards, but such enhancement has not occurred even 10 years after [r12237](#) was committed. In my opinion, this suggests that the Rails team does not consider empty option elements are disallowed.

Based on the above, I propose to delete the code to insert nbsp to every blank option element.

Based on the above, I propose to delete the code to insert nbsp to every blank option element.

I'm in favor of it.
