

Redmine - Defect #10134

Case insensitive search is not working with postgres 8.4 and umlauts

2012-02-02 10:33 - John Wilcox

Status:	Confirmed	Start date:	
Priority:	Normal	Due date:	
Assignee:		% Done:	0%
Category:	Search engine	Estimated time:	0.00 hour
Target version:		Affected version:	1.3.0
Resolution:			
Description			
We are using Redmine 1.3.0 with postgres 8.4 on GNU/Linux: -----			
Ruby version 1.8.7 (x86_64-linux)			
RubyGems version 1.3.7			
Rack version 1.1.2			
Rails version 2.3.14			
Active Record version 2.3.14			
Active Resource version 2.3.14			
Action Mailer version 2.3.14			
Active Support version 2.3.14			
Edge Rails revision unknown			
Application root /var/lib/redmine			
Environment production			
Database adapter postgresql			
Database schema version 20110902000000			
About your Redmine plugins			
HTTP Authentication plugin 0.3.0-dev			

Postgres database collation is UTF-8.			
When I create a new issue, for example titled "Ämber", and try to search for it is only found when I search for it in lower case "ämber".			
It looks as if mysql is not affected, since in redmine demo environment I cannot replicate this problem: http://demo.redmine.org/search?q=%C3%84mma&scope=all&all_words=&all_words=1&titles_only=&issues=1&submit=Submit			
I have found a fix for it though: http://www.redmine.org/issues/1608			
After modifying the relevant file and installing the unicode gem the problem is solved.

History

#1 - 2012-02-02 11:12 - Etienne Massip

- Status changed from New to Closed

- Resolution set to Duplicate

Closed as duplicate of [#6551](#).

I guess that demo site is running with Ruby 1.9?

#2 - 2012-02-02 11:20 - John Wilcox

- Status changed from Closed to Reopened

[#6551](#) is about search highlighting. My problem is that when searching for "Ämber" no search results are returned at all.

#3 - 2012-02-02 12:29 - Etienne Massip

- Status changed from Reopened to Confirmed

- Resolution deleted (Duplicate)

Sorry; you're right there is an issue here I can reproduce with Ruby 1.8.7 although I think it should be gone with 1.9 (need to be tested with trunk). Ruby 1.8.7 downcases "Ämber" to "Ämber" instead of "ämber", so PG doesn't find it.

#4 - 2015-09-08 05:27 - Jens Krämer

this works with 3.1-stable, Ruby 2.2.2 / PostgreSQL 9.4

#5 - 2018-04-16 11:16 - Alexander Ryabinovskiy

I confirm this bug

Environment:

Redmine version	3.4.3.stable
Ruby version	2.4.4-p296 (2018-03-28) [x64-mingw32]
Rails version	4.2.8
Database adapter	SQLServer (2012)
