In 1.3-stable, you need to install edavis10-object_daddy.
In trunk, edavis10-object_daddy is defined at Gemfile.
source:trunk/Gemfile@8908#L71

hi,i had install edavis10-object_daddy,maybe some plugin cause this error,when i remove all unofficial plugin,the units test are pass,how can i fixed
it.here is my plugin init.rb:

```
require 'redmine'
require "hooks/issue_extention_hooks"
require "hooks/my_extention_hooks"
require "hooks/project_extention_hooks"
require "issue_fixed_version_require"
require "hooks/context_menu_hooks"
require "paths/watchers_controller_patch"

require "paths/account_controller_patch"
require "regist_custom_field"
require "init/init_custom_field"
require "tasks/svn_reveive_process"
Dispatcher.to_prepare :redmine_issue_extention do
  unless WatchersController.included_modules.include? WatchersControllerPatch
    WatchersController.send(:include, WatchersControllerPatch)
  end
  unless AccountController.included_modules.include? AccountControllerPatch
    AccountController.send(:include, AccountControllerPatch)
  end
end

unless Redmine::Plugin.registered_plugins.keys.include?(:redmine_extention)
  Redmine::Plugin.register :redmine_extention do
    name 'plugin'
    author 'jan'
    description ''
    version '0.0.1'
```

```
      url ''
      author_url ''
    end
end

Redmine::AccessControl.permissions.each do |permission|
    next unless permission.name==:edit_issues
    permission.actions << "#{:pop_query}/#{:pop}"
end

#ActionController::Routing::Routes.add_route('projects/:project_id/pop_query', :controller => 'issues', :actio
n => 'pop_query')
#ActionController::Routing::Routes.draw do |map|
#   map.connect 'projects/:project_id/pop_query', :controller => 'issues', :action => 'pop_query'
#end
```

is that error?
thx
