Target version:	1.2.0			
Resolution:	Fixed			

Description

IMHO it could be great to differentiate saved queries:

- global vs project's local
- public vs private

This can be solved by adding icons, or maybe better:

- group queries into wo groups: global and project's local, put divide between these groups (horizontal rule)
- add icons for public/private - maybe one icon only for public or private will be ok.

Logic can be also switched, so it can be grouped by Private/Pulic and flagged by icons per global/local.
