<b>Description</b>	
<p>We would like to have redmine main and context menu get more compact, so grouping similar features together in collapsable and expanding menus in a 2 level structure. This is especially helpful if you use some plugins which make a lot of menu entries.</p> <p>The chili project ( <a href="https://www.chiliproject.org/issues/559">https://www.chiliproject.org/issues/559</a> ) already supports that but it is part of the core views, so there no choice any more.</p> <p>It is preferable to be able to make this part of theming, but at the moment i think it is not possible.</p> <p>This would need that redmine needs a "hooking and templating feature" so that core and plugins main and context menu entry rendering can be controlled detailed and flexible.</p> <p>Following things must be controllable:</p> <ul style="list-style-type: none"><li>• menu type where entry shall be placed, e.g main menu or context menu</li><li>• ordering (which position does an entry has top down or left right)</li><li>• nesting level (is an entry in 1 or 2 level )</li><li>• menu entry type<ul style="list-style-type: none"><li>◦ link entry (map to any url in redmine or else)</li><li>◦ container entry (level 1 container for "menu entries" on level 2)</li></ul></li></ul> <p>Beyond what plugins or core features have a s default menu theme config it shall be possible to tweak that overuling this installation default.</p>
