Target version:	1.4.2		
Resolution:	Fixed		
Description			
<p>In #2879 you added a header called 'List-Id' to help solve your vacation responder problems.</p> <p>In #2984 however this change was revoked because it didn't solve the problem with Outlook.</p> <p>However, I'd like to see the List-Id header brought back, as it gets treated like a first class filter type in Gmail filtering and would greatly help my workflow. I can see that the original problem was around bulk-handling and vacation responders, but this request isn't aimed at that at all.</p> <p>I would presume the solution would be to bring back the original code in app/models/mailer.rb:</p> <pre>'List-Id' => "<#{Setting.mail_from.to_s.gsub('@', '.')}>"</pre> <p>As show in this revision:</p> <p>http://www.redmine.org/projects/redmine/repository/revisions/2565/diff/trunk/app/models/mailer.rb</p>
