Redmine - Feature #10888
Bring back List-Id to help aid Gmail filtering
2012-05-11 20:05 - Ken Barber

Status: Closed
Priority: Normal
Assignee: Jean-Philippe Lang
Category: Email notifications
Target version: 1.4.2
Resolution: Fixed

Description

In #2879 you added a header called 'List-Id' to help solve your vacation responder problems.

In #2984 however this change was revoked because it didn't solve the problem with Outlook.

However, I'd like to see the List-Id header brought back, as it gets treated like a first class filter type in Gmail filtering and would greatly help my workflow. I can see that the original problem was around bulk-handling and vacation responders, but this request isn't aimed at that at all.

I would presume the solution would be to bring back the original code in app/models/mailer.rb:

    'List-Id' => '<#{Setting.mail_from.to_s.gsub('@', '.')}>'

As show in this revision:
