Description

In #2879 you added a header called 'List-Id' to help solve your vacation responder problems.

In #2984 however this change was revoked because it didn't solve the problem with Outlook.

However, I'd like to see the List-Id header brought back, as it gets treated like a first class filter type in Gmail filtering and would greatly help my workflow. I can see that the original problem was around bulk-handling and vacation responders, but this request isn't aimed at that at all.

I would presume the solution would be to bring back the original code in app/models/mailer.rb:

'List-Id' => "<#{Setting.mail_from.to_s.gsub('@', '.')}>""}

As show in this revision:

Associated revisions

Revision 9687 - 2012-05-13 12:44 - Jean-Philippe Lang

Restored List-Id header in email notifications (#10888).

History

#1 - 2012-05-13 12:47 - Jean-Philippe Lang
- Status changed from New to Closed
- Assignee set to Jean-Philippe Lang
- Target version set to 1.4.2
- Resolution set to Fixed

Header added back in 1.4.2.
