Redmine - Feature #10914
Include is_private setting in xml/json output
2012-05-14 15:23 - Cory Riddell

Status: Closed
Priority: Normal
Assignee: Jean-Philippe Lang
Category: REST API
Target version: 2.6.0
Resolution: Fixed

Description

When getting issues with the REST api, the is_private flag isn't included.

I've solved the problem on my local copy by modifying two files:

- views/issues/show.api.rsb
  - add api.is_private @issue.is_private

- views/issues/index.api.rsb
  - add api.is_private issue.is_private

Also, can be seen as related to #8577.

#2 - 2013-02-12 18:22 - Cory Riddell

#8577 fixes the issue for the issue list, but does not address the problem with including the is_private flag in the json / xml output.

Seems to relate with #10870
+1

If we have this really simple solution, why it is not included in current release?

I would also suggest change this issue track to 'Bug', 'Defect' or something similar, because we can modify this field with PUT request. All Issues obtained with REST api seems to be not private now.

Uploaded a patch to provide this feature.

Feature added in r13395, thanks.
