| <b>Description</b><br>We have a custom field that defines the 'owner' of a task (even as it is assigned to different people) - it is of type user. That field cannot be used for sorting or grouping, which is a major problem for our daily management reports as it has become one of our key indicators. |                                  |
