<b>Description</b> I have found the svn user password in clear text into the html sourco of the projects settings page (projects/settings/1).  This password is also in clear text into the mysql database.  This is a very critical security bug. Is possible to manage this password in hashing mode (like the admin password)???  Thank you

#### History

##### #1 - 2007-10-04 14:55 - Jean-Philippe Lang

This password is also in clear text into the mysql database.

What do you propose ? Encryption ?

svn user password in clear text into the html source

Fixed in [r942](#).

This password is also in clear text into the mysql database

This password can not be hashed in the database since Redmine needs it in clear to run svn commands.
