

Redmine - Defect #11679

CVS pserver : missing size, revision, author and comment

2012-08-22 12:11 - Damien Couderc

Status:	New	Start date:	
Priority:	Normal	Due date:	
Assignee:		% Done:	0%
Category:	SCM	Estimated time:	0.00 hour
Target version:		Affected version:	2.0.3
Resolution:			
Description			
<p>Hi, I got a problem using a cvs pserver root as all the files are missing the fields enumerated in the subject.</p> <p>I rsynced the same repository into a local repository of the redmine server and the problem is gone. But I'd like to avoid to rsync on this server.</p> <p>Using cvs in command line for rls and rlog I was unable to find a difference that would explain the wrong behavior with pserver.</p> <p>I'll try to reproduce this at home with a repository without sensible data.</p>			

History

#1 - 2012-11-15 15:07 - Damien Couderc

Ok I'm late but it seems that using the required GNU cvs on an original cvs repository is the problem.

This is a problem when you don't have the control of the cvs version of the remote repository.

Any chance to make it compatible with non GNU cvs ?

#2 - 2013-01-18 07:42 - Dominik Follmann

Hi,
I had a very similar Issue, when I was using a GNU CVS client in combination with a CVSNT server (though, I'm not sure, if this combination caused the error). The problem and the solution is described here -> <http://answers.bitnami.org/questions/9894/problems-with-cvs-repository-in-redmine-220-subdirectories-not-working>. If this also helps you, maybe we should integrate this as a patch then.

#3 - 2013-02-05 09:35 - Maciej Maczynski

Could you please put the patch right here? Call me stupid, but I cannot find actual code under bitnami link you've quoted.
