

Redmine - Feature #1213

Allow Slashes in wiki URLs

2008-05-08 17:01 - Jason Trahan

Resolution:	
Description Currently Trac allows you to use slashes to notate a hierarchy for the wiki pages. It would be nice is RedMine would also support the same concept. Example. SomePage/SomeSubPage1 SomePage/SubPage2/SubSubPage1 SomePage/SomeSubPage3 Trac also allows for directory style links. Examples ../ Will bring you up a level ./SubPage2 is a shorthand for the subpage so you don't have to link to SomePage/SubPage2 for example.

This would be a very useful feature for adding some intuitive hierarchy to wiki pages.

Are there any plans to implement it in the foreseeable future?

This could also make the "Parent page" field unnecessary as you can generate the breadcrumbs from he URL

+1 if this means pages can have the same name under different parents.

In Gitlab the wiki was initially flat, then they added support for slashes in wiki slugs. Maybe the config/routes.rb from Gitlab will help moving this issue forward.
