

Redmine - Feature #1226

query results on wiki pages

Resolution:	
Description Testing in parallel trac, I noted an interesting feature of trac being the possibility from the wiki pages to define macros displaying the results of specific sql query. Would it be possible to have such a feature, since it allows to present the content of the issues tracker with text around, which can be useful to edit reports to high management.

Trac has some wonderful macros to include tickets (something like `roadmap=0.1&status=closed`). It would be (very) nice & useful to have a similar approach in redmine. I guess it's the only feature where trac is doing more than redmine.

Thx

(ps : +1 !)

Does [#1700](#) works for you? I haven't tried it yet, probably tomorrow if I have time. Adding new macros seem to be pretty easy.

Looks like the `{{ref_issues}}` macro does.

#10 - 2012-10-25 10:33 - Anonymous

Now it's [Wiki List plugin](#)

Did anybody test http://www.r-labs.org/projects/wiki_lists/wiki/Wiki_Lists_en plugin in the latest version of REDMINE?
