

Redmine - Defect #12420

URLs in notification emails do not include the sub-URI

2012-11-21 16:59 - Drew Keller

Status: Closed	Start date:
Priority: Normal	Due date:
Assignee:	% Done: 0%
Category: Email notifications	Estimated time: 0.00 hour
Target version:	Affected version: 2.0.0
Resolution:	
Description	
<p>I have Redmine working as configured in #11881, #12102, etc. Everything seems to be working except that issue URLs in the notification emails generated by Redmine do not include the sub-URI. For example... http://my.domain.com/issues/713 instead of http://my.domain.com/redmine/issues/713</p> <p>Someone pointed this out to me recently (they got 404 error) so I went back in my email history and this problem started when I upgraded from Redmine 1.2.1 to 2.0.2. I don't know if other people with sub-URIs are having the same issue and don't know about it, or if this is actually working for them.</p> <p>The call in the mailer is @issue_url = url_for(:controller => 'issues', :action => 'show',...</p> <p>In my limited Ruby knowledge, I'm not sure how the result of this might be different from the urls generated for issues elsewhere in Redmine that seem to be working.</p> <p>Environment: Redmine version 2.1.2.stable Ruby version 1.9.2 (i386-mingw32) Rails version 3.2.8 Database adapter Mysql2</p>

History

#1 - 2013-11-03 22:03 - David Gesang

We are having the same issue since updating to Redmine2. Is there a fix for this anywhere?

Environment:

```
Redmine version 2.3.2.stable
Ruby version 2.0.0-p247 (2013-06-27) [i686-linux]
Rails version 3.2.13
```

#2 - 2014-11-16 12:58 - Ivo Maixner

Affected by the same issue.

In addition, if the issue has an attachment, the notification email contains a direct link to it, which is broken in the same way - it is missing the sub-URI prefix.

Environment:

```
Redmine version 2.6.0.stable
Ruby version 2.0.0-p594 (2014-10-27) [x86_64-linux]
Rails version 3.2.19
```

Please provide a fix or a hint how to work around this.

#3 - 2014-11-16 21:35 - Jean-Philippe Lang

- Status changed from New to Closed

In Administration, Settings, General, enter your hostname and suburi in "Host name and path" (eg. hostname/suburi). Links in emails will use this setting.

#4 - 2014-11-17 09:48 - Ivo Maixner

I've just found out the same solution and came here to describe it.

Anyways, I confirm this resolves the issue for me. Thank you.
