

Redmine - Defect #12525

empty filter attributes results in "undefined" filter value

2012-12-06 16:08 - Terence Mill

Status:	Closed	Start date:	
Priority:	Normal	Due date:	
Assignee:		% Done:	0%
Category:	Issues	Estimated time:	0.00 hour
Target version:		Affected version:	2.1.4
Resolution:			
Description			
In my issue list "Add filter" drop-down i have empty lines after migration from redmine 1.3 to 2.1.4. If i select this dempty lines i get "undefined attribute name". I have no iead where this undefined names come from. shot.jpg			
How can i elloborate that in my mysql database by query. Maybe migration problem, maybe plugins incompatible?

Can you attach the html source of your issue list?

#2 - 2012-12-10 15:13 - Terence Mill

I would realy like to, but even if i create an "empty project" (no users) i still have a lot of productive project data in the html source code, its difficult to remove or make it anonym. Can u give me a hint what shall i look for? Or which part of the site you need, so i only have to make that small part anonym.

Then i found the last two filter entries without name attrib.

```
, "hudson_job": {"type": "list_optional", "values": []}, "hudson_build": {"type": "integer"};
var labelDayPlural = "Tage";
$(document).ready(function() {
  initFilters();
  addFilter("status_id", "o", [""]);
});
```

The hudson plugins seems to extend the filters without name, so that could be the problem. I will write a bug report (<http://www.r-labs.org/issues/1143>) to the author.

If you agree with my assumption, this can be closed in favor for a plugin bug.

For hudson plugin i also reported here: <http://www.redmine.org/boards/3/topics/14348?r=34972#message-34972>

Btw. the same problem occurs for plugin [redmine_tags](#), which already reported and [fixed](#)
