Description

We are using Redmine and we made several custom fields for different trackers. Now, when we open the dropdown in the issues to filter the list, it is hard to retrieve a field. Is it possible to order fields or at least, ordering custom fields.

This relates to [#12250](#).

Maybe the same orderinge (defined in [#12250](#)) could be used to define the order in the dropdown.

#2 - 2015-11-12 15:23 - Maik Lindner

+1 this would be a great feature
