Hi Miura,

It looks like you achieve a great job. Some remarks:

- could you create a new migration, instead of editing m055: it'd break the migration system for users
- is it possible for you to provide a test-case to include with this patch? I don't know if it's possible to provide a stand-alone repository of MS VSS, but it could be a real good thing to prevent regression
- have you possibility to check that a redmine instance with your patch, running on linux, still work (without using the VSS capability, of course...) It should work without problem, but we can't know...

Thank you.

#2 - 2008-05-20 13:42 - Aruo Miura

- File VisualSourceSafe.diff added

Hi Thomas.

First, Thanks for your advices. Second, might be hard to read because of my poor English...

- Maybe no migration needed. It's my experimental codes. In RubyForge, I didn't put m055's codes. And got some reports it works. So maybe OK.
 I delete it and re-upload patch.
- Need to read licence of VSS... VSS can create stand-alone repository. But I don't know providing repository is allowed.
- I don't have linux or other non-windows environments.
 So it's hard to check it. Need setup first...
 Running under not Windows environments like linux, it does't work because of No OLE.
 I don't know WINE or other Windows Emu support them or not.
 Of course, not select VSS for SCM, maybe it should be work just you said.

I know checking this patch is too hard, and not suit for major users.

So I think it's difficult to incorporate this patch to redmine trunk.

But "this patch is here" is important, I think so.

Of course, I'll try to check under linux and try to create test-case. But need much more time.

Thanks.

#3 - 2008-05-21 11:44 - Thomas Lecavelier

Outch... The migration was just ugly: it's effect was to "convert" all existing repositories in Redmine in VSS repositories... It would be a terrific bug ;)

You're right: there's very few chance to commit this patch to trunk without far more tests, but it's a good beginning.

I'd add a link to this patch in the redmine guide, hoping it could help someones.

Any feedback from users is welcome, of course.

#4 - 2011-01-18 06:55 - Toshi MARUYAMA

- Category set to SCM

#5 - 2018-10-07 08:38 - Go MAEDA

- Status changed from New to Closed

Microsoft no longer supports Visual SourceSafe. The mainstream support for Visual SourceSafe 2005 was ended on 2012-07-10.

https://support.microsoft.com/en-us/lifecycle/search?alpha=Visual%20SourceSafe

Probably few people really need this feature in 2018.

#6 - 2018-10-07 08:39 - Go MAEDA

- Has duplicate Patch #228: for VisualSourceSafe patches added
