Redmine - Feature #13051

Support any macro in (pdf) export for wiki's and issues

2013-02-01 09:08 - Terence Mill

Target version:	3.0.0			
Resolution:	Fixed			

Description

This issue will be a container (link by reference other issues) for all the defect and feature issues existing,
which mostly pick just one part of the problem (macro).

At the moment the export function ignores macros or even there get stripped out completly (this is a workaround - no solution!).
Besides redmine core macros, plugin itself bring many macros into place which don't get rendered in pdf like in html view - that's a big disadvantage.
From the user side, the expectation is wysiwyg from the screen to any export format - no matter if html or pdf.

Yes, it' s a challeging task, but rich export is a strong feature in every system.

From my point of view its a general topic, and a solution in best can export pdf the same way the content area in the web page looks like. If pdf is problematic for this, maybe another export format (optimized for transport and print) is a better approach.

Related issues:

#9842 - {{toc}} is not replaced by table of content when exporting wiki page to pdf
#11697 - Problem with Wiki export to PDF / HTML / TXT — 'include' does not includes
#10689 - PDF export prints brackets on wiki links
#9783 - PDF Export ignores Child pages
#4992 - Add printer friendly version of pages
#275   - Wiki to Documents
#550   - Function to export whole wiki

Btw. regarding the last issues above there are already plugin's like redmine_pdf_documents that make use of the redmine core export, and beeing able to custom sort and create a booklet from selected wiki pages to put out on big pdf in own order and selected pages.

Revision 13944 - 2015-01-25 10:04 - Jean-Philippe Lang

Adds support for macro and Redmine links in PDF export (#13051).

Revision 13946 - 2015-01-25 10:23 - Jean-Philippe Lang

Render issue description and journal notes with #textilizable (#13051).

History

#1 - 2013-02-07 02:48 - Toshi MARUYAMA

- Category set to PDF export

#2 - 2013-03-29 08:12 - Sergey Prosin

That would be really useful functionality because it will allow us to use redmine wiki as project documentation source. Especially with redmine_pdf_documents plug-in available.

#3 - 2013-05-30 00:02 - Sergio Cambra

But redmine_pdf_documents doesn't work in 2.x

#4 - 2013-05-30 01:05 - Terence Mill

Yes the 2.x branach is
https://github.com/klausmeyer/redmine_pdf_documents/commit/3b7e464098484d0af7e61583adbbd6c8dac276ac

#5 - 2013-05-30 07:58 - Sergio Cambra

Thanks, README is misleading becuase is read there is no redmine 2.x port

The redmine_pdf_wiki plugin uses wkhtml2pdf to export pdf and promises to resolve macros.
A big disadavantge is that it's only runny on passenger.

I think I have found a way to call macros when a pdf export is requested.

The function responsible for converting Redmine's textile to html in the pdf exportation class is formatted_text. This function then calls the following function to convert the text from textile to html:

```
Redmine::WikiFormatting.to_html(Setting.text_formatting, text)
```

I noticed that macros were not processed when the pdf export request was issued. Knowing that both the pdf parser and the browser view were rendered based on html, and that the browser was correctly rendering the *hello world* macro, it looked like different code paths were being followed. So I looked at the rendering of the View and found a method called textilable. This method also converted the textile data into html, but did a bit more work, including processing the macros. Contained in it is also the Redmine::WikiFormatting.to_html method.

The problem of macros not always translating well to other usages, besides in a browser, will be dealt later.

Logically the only change to be made was to change WikiFormatting.to_html to textilable and that is what I have done. I had some problems including the right libraries and when I was out of ideas why the errors were so strange, I looked for how textilable was being used in the unit tests. Making the appropriate changes made everything work with very few changes.

To apply the patch (Redmine 2.3.2) simply type:

```
patch /path/to/redmine-2.3.2/lib/redmine/export/pdf.rb /path/to/pdf_macro.patch
```

Hope this helps.

#11 - 2013-10-02 07:57 - Toshi MARUYAMA

- Has duplicate Defect #12964: Macros should be rendered to PDF added

#12 - 2013-10-02 08:28 - Toshi MARUYAMA

- File pdf-macro-trunk-r12194.diff added

Note-11 patch is not unified diff.
This is converted patch.

#13 - 2013-10-16 09:10 - Yurii Monakov

Patch from Note-12 causes error 500 on issue and Wiki PDF export (Redmine 2.3.1 and Redmine 2.3.3). Logs:

- Issue export

Yes Yurii I found that problem and much more. it turned out that it was not straight forward. I have made significant progress to enable the PDF rendering to use textilizable but it is not there yet(wiki links are not parsed and some internal errors are still not solved) if you are in a hurry I can drop here the in progress patch, maybe you could finish it. I am sorry I have not given the follow up but I have been very busy.

#15 - 2013-10-17 12:19 - Paulo Neves

- File pdf_macro.patch added

Here goes the patch, as mentioned in my note before. Wiki links are not working and sometimes unescaped quoted also don't work. I will write about it further when I have time.

I also hope that now the patch is in the correct format.

#16 - 2013-12-22 13:05 - Paulo Neves

After some investigation I concluded that the problem with the crashes was due to text.html_safe in the textilizable method.

```
    if @parsed_headings.any?
      replace_toc(text, @parsed_headings)
    end

    text.html_safe

  end
```

For some reason the CGI.unescapeHTML crashes when the string coming out of textilizable is html safe and has quotes. It is not possible remove the html_safe method in textilizable because it would break most of the code relying in it. I have researched html_safe method and found that the way it is implemented in textilizable is dubious because there is user input being considered safe. I am not sure of additional security considerations, as I have tried injecting Javascript without success.

I found that the problem described above (CGI.unescapeHTML not failing) is really weird, because if I apply html_safe to the text and then perform a "cast" to force the [SafeBuffer](#) no error is triggered. On the other hand, even when calling CGI.unescapeHTML on an object returned by to_s method, an error is triggered. It should be noted that the to_s method simply returns self, so it is maybe expected that it's calling is redundant, and obviously would trigger the error just as a normal SafeBuffer would.

The solution I found was to keep everything unchanged in textilizable but performing a [hard string cast, string interpolation](#) in the formatted_text(text) method in [pdf.rb](#)

Finally I was able to reproduce and definitely confirm the error in the Rails console:

```
CGI.unescapeHTML('The experimental macro Hello Latex[&amp;quot;\&amp;quot;sdsd\&amp;quot;&amp;quot;'.html_safe
)
```

I will now report it to the [Rails mailing list](#) to hear their opinion.

The last problem standing is the links to the Wikis embedded in the pdf. I don't know yet why they are not working but I will play with the Rails console to expedite the resolution of the problem. Afterwards I believe a patch is ready, and the tests should be generated.

#17 - 2014-06-27 11:23 - Piotr Oh

Hi Paulo, is there any progress with your patch?

#18 - 2014-09-26 12:06 - Toshi MARUYAMA

- Has duplicate Defect #17970: Wiki PDF export doesn't render macros added

- Has duplicate Defect #18748: exporting wiki with child page not work correctly added

#21 - 2015-01-05 06:06 - Qing Li

+1

#22 - 2015-01-22 12:32 - Qing Li

Please testing include macro, the bug have not been fixed, I am using 2.6.0 stable version.

#23 - 2015-01-25 10:10 - Jean-Philippe Lang

- Status changed from New to Closed

- Assignee set to Jean-Philippe Lang

- Target version set to 3.0.0

- Resolution set to Fixed

Fixed in [r13944](#), macros are now processed in the PDF export, as well as Redmine and wiki links.
