Redmine - Patch #13121

Context menu in issue view - add class name

Description

I definded an additional custom field that is shown in the context menu from the issue view. My custom field is a list. Unfortunately, the list items wraps because the context menu is not wide enough. So the list gets even longer.

Could same class names added so I can define the width of the context submenu in the stylesheets?

History

I fixed it like this:
/app/views/context_menus/issues.html.erb

```
  <% @options_by_custom_field.each do |field, options| %>
    <li class="folder">
      <a href="#" class="submenu"><%= h(field.name) %></a>
-       <ul>
+       <ul class="<%= h(field.name.downcase.gsub(/[^a-z]/, '')) %>">
```

Additional Stylesheets:
#context-menu li.folder > ul.mycustomfield {
width: 260px;
}

It would be great if this or a better solution will be merged to redmine.

- Status changed from New to Closed

You already have a class for each custom field cf_[id] on the li node. It was added in r11066 and will be available in 2.3.0. Then you can use (assuming your custom field id is 3):

```
#context-menu li.folder.cf_3 > ul { width: 260px; }
```
