Redmine - Feature #13275

Add query parameters/filter for listing time entries via REST API

2013-02-25 06:55 - Chad B

Description

Currently it appears that the only way to retrieve time entries with the REST API is to either list **all** time entries or request them one at a time by ID. At least, that is all that is documented (http://www.redmine.org/projects/redmine/wiki/Rest_TimeEntries).

This is of very limited usefulness given that an instance may easily contain thousands upon thousands of time entries. It would be very helpful to be able to query by certain conditions or in other words filter.

Primary candidates for filter conditions would be:

- Updated date
- Created date
- ID number
- User
- Project
- Issue
- Activity
- Combinations of the above

Conditions would need to support ranges.

Hypothetical examples:

- GET /time_entries.xml?user=X
- GET /time_entries.xml?issue=X
- GET /time_entries.xml?updated_on=>=2013-02-24
- GET /time_entries.xml?id=><100|200

Priority wise I believe the *queries by ID and updated date are the most important* because those would at least make it possible to check for recent updates or new entries after some starting point, which is crucial functionality for many integrations.

History

#1 - 2013-03-11 10:21 - Knut Meyer

Hi,

here I would like to name one other filter condition

- spent on

Thanks!
Knut

#2 - 2013-06-04 18:38 - Bob Pack

+1. This makes the "time entries" part of the API very useful. Without it, it's needlessly intensive to do simple things. I think the most key filter would be Knut's "spent on" filter suggestion.

#3 - 2013-06-04 18:47 - Bob Pack

Should have known it already exists! Great.
This works just fine on my server (2.2.2)
http://<redmine URL>/time_entries.xml?spent_on=%3E%3C2013-05-01|2013-05-31

Also tried it with issue_id and project_id, which worked fine as well.

#4 - 2013-06-18 11:18 - shawn gao

hi man, the url can't work on my server. They just ingore the parameter like "spent_on=%3E%3C2013-05-01|2013-05-31"
can you tell me why would that happen
thanks!

#5 - 2013-07-11 12:05 - Juozapis Juozapauskiksi

Bump
Is there any news regarding this one?
Spent on is working, but updated_on created_on is not :(

#6 - 2013-07-18 12:19 - Juozapis Juozapauskiksi

Bump. Any news on this one?
Sorry, but I think this is critical one for Redmine integration.

Sorry, didn't see this till now. If you're using the exact same query I used before, it could be a permissions issue perhaps? Make sure the API token you are using has appropriate rights? I can't think of any other reason the same query that works on mine wouldn't work on yours, unless it's a version difference (as I mentioned, I am on a 2.2.2 build)

#13 - 2015-07-09 16:20 - V Lindell

As previously mentioned this can already be done "/time_entries.xml?spent_on=><2015-06-01|2015-06-30".

API Documentation should be updated by the filtering posibilities already available.

#14 - 2015-08-04 12:13 - Tommaso Visconti

It's also possible to filter by user id:

```
/time_entries.json?user_id=<ID>
/time_entries.json?user_id=me
```

This is totally undocumented!!!

#15 - 2015-11-05 07:12 - Eugene Terekhov

Filtering by created/updated date would be very appreciated.

That spent_on filter just isn't enough.

#16 - 2015-12-04 10:04 - Dain Gosbee

I agree with Eugene that the spent_on filter is too limiting. I also would heavily appreciate being able to filter by created_on/updated_on.

+1 to Eugene´s post.

#17 - 2016-02-11 11:01 - Thibaut Tropardy

For ticket filter

```
/time_entries.json?issue_id=<ID>
```

#18 - 2016-04-18 11:07 - Valentin Rudikov

Hello! Also it would be good to support filtering by multiple users:
/time_entries.json?user_id=[123,456]
It will reduce requests count - no need to query server multiple times(for each user)

#19 - 2016-10-28 13:20 - Anonymous

- File 0001-Expose-created_on-field-for-time-entry-queries.patch added

Hello, I've run into this issue as well and wrote a small patch to expose the created_on field to the REST API. I'd welcome any feedback, especially on further steps to include it into Redmine proper.

#20 - 2018-05-02 19:41 - Pablo Díaz

Somebody know howto filter by time interval?.

If i use the URL (replacing redmineUrl by a real url and keyValue with a valid key value):
https://redmineUrl/time_entries.json?key=keyValue&spent_on=2018-03-01 it returns a valid time entries for this day but if I use the interval filter as said in manualPage: http://www.redmine.org/projects/redmine/wiki/Rest_TimeEntries#spent_on-filter such us:
!https://redmineUrl/time_entries.json?key=keyValue&spent_on=><2018-04-01|2018-04-30 It returns the same values as doesn't write any spent_on date filter.

Anyone knows how to use spent_on date filters? May be a bug?

My redmine version is 3.3

#21 - 2018-05-03 12:50 - Pablo Díaz

I've found a solution for comment 20.

If I put at the end of URL *&limit=5000* I get the *time_entries* for the given interval with a correct result.

That is, for the example wrote on comment 20 the final url would be:

!https://redmineUrl/time_entries.json?key=keyValue&spent_on=><2018-04-01|2018-04-30&limit=5000
