

Redmine - Defect #13335

Autologin does not work with custom autologin cookie name

Target version:	2.3.0	Affected version:	2.2.3
Resolution:	Fixed		
Description			
It appears that Redmine has two problems with autologin: 1. It does not work with OpenID. This is discussed in #3371 . 2. If you set custom autologin_cookie_name, autologin does not work, since the code that checks for that cookie still assumes default name (:autologin) Attached patch fixes both of those issues - hopefully ;-)
