<b>Category:</b> Issues permissions	<b>Estimated time:</b> 0.00 hour
<b>Target version:</b> 2.1.0	
<b>Resolution:</b> Fixed	
<b>Description</b> I have several projects with the customers and requesters entering there own requests, bugs, etc. similar to how the Redmine project is organized. I have been using the versions to plan roll-outs and in general that function works great.  I have been having the same problem that I see on this site where the users are adding their issue to whatever target version they wish. I was wondering if there could be a permission added, maybe under issue tracking, like "Can Assign/Modify Version".  The other way would be to add a set of statuses to the version such as "Open", "Locked", and "Completed" where we can specify what actions can be performed on the scope of a version.  Thanks for such a valuable project.

### History

#### #1 - 2008-06-04 12:56 - Thomas Lecavelier

Duplicated from [#1245](#)

#### #2 - 2008-06-04 14:51 - Curtis Stewart

I did not realise that this was a duplication. I did a search for issues "all words" for "version status" and the issue did not show up.  
I just redid the search with "status version" and both issues show up????

#### #3 - 2009-11-08 14:01 - Jean-Philippe Lang

- Category set to *Issues permissions*

The other way would be to add a set of statuses to the version such as "Open", "Locked", and "Completed" where we can specify what actions can be performed on the scope of a version.

This is committed in [r3020](#). But I keep this ticket open since the original request was for controlling version assignement based on user's role.

#### #4 - 2012-07-15 18:29 - Jean-Philippe Lang

- Status changed from *New* to *Closed*

- Target version set to *2.1.0*

- Resolution set to *Fixed*

Implemented as part of [#3521](#). You can now control the permission on each field per role, tracker and status.
