Description Hi , I have modified the default start page to "wiki" of project. But , is it possible to make a page which is not a project? as http://www.redmine.org/projects/redmine/wiki , when every one login redmine, he can view the wiki directly. Now, below is my way : root :to => 'wiki#show', :project_id => 'id' , :as => 'home' but , this is a project not page and I have to include all member to this project .thus , all just can view it.

What is desirable in this case, is to have a global wiki (see [#1040](#)) where one of the page can be a landing page.

Alternatively you can try [CMS plugin](#) that helps significantly.
