Description			
Hello,			
I would like to do this :			
When I send an email to tracker-project1@bar.com , it's create an issue for the project1			
When I send an email to tracker-project2@bar.com , it's create an issue for the project2			
I don't know how to use this ? But, the second problem is, when Redmine will send the notification mail, he'll send from tracker@bar.com ... How will he know to update the issue for project2 for example ?			
Or using a same address for different project ? I have tested rake without "project=project1", and the mail stay in the mailbox...			
For the moment, i'm using rake to check an imap mailbox... I'm using the last version of Redmine.			
Regards,

- Tracker changed from Defect to Feature

#2 - 2013-04-11 17:45 - Dipan Mehta

In essence this requirements fall into per-project functionality configuration. This can be put under the umbrella of [#4015](#) (settings overridable at project level) or [#1853](#) (make projects truly independent). So in either approach this can be achieved.

Specifically, this issue is a related (may be duplicate) of [#7349](#).

What would be the improvements by implementing your request?

You can already say project: foo and tracker: bar in the mail body to achive the same...

#4 - 2016-03-18 05:37 - Toshi MARUYAMA

- Has duplicate Feature #22071: Different outgoing email addresses - per project email alias / different incoming email alias with mapping into a specific project added

#5 - 2018-09-15 09:24 - Go MAEDA

- Status changed from New to Closed

- Resolution set to Duplicate

You can select a project by subaddress since Redmine 3.2. It means that you can use email addresses like this: foo+projectid@redmine.example.com. See [#20732](#) and [RedmineReceivingEmails](#) for details.
