Redmine - Feature #1387

Support git branches and tags in repository browser/activity/issue associations

2008-06-05 16:39 - Leandro Lucarella

Description

Git branches and tags are ignored by Redmine. When you browse a repository, there is no way to see an specific branch or tag.

Even worse, commits that aren't in the master branch, are not shown in the **Activity** section and are not associated to issues, making almost impossible to track changes in issues when working on multiple versions (one branch per version).

I'd also welcome this functionality.

#2 - 2008-06-09 10:34 - Thomas Lecavelier

Should be a feature request. Marked as duplicated from #1406.

- Status changed from New to Closed

Committed Adam Soltys patch/branch with a few minor changes in r2840. This is a pretty big change so I'd like to get some more feedback and bug reports on how it's working in the wild. I tested it with a few repositories and didn't run into any errors but there might be some edge cases that come up. Just open new bug reports for anything you find and I'll try to fix them.
