

## Redmine - Feature #14759

### Adding project ID to CSS classes at least in issue screen (but wherever it is possible)

2013-08-23 10:08 - Radek Terber

<b>Status:</b> Closed	<b>Start date:</b>

<b>Resolution:</b>	
<b>Description</b> <p>I would appreciate to have textual project ID (not a database numeric ID but the text typed into project form) in page's CSS classes - at least for issue related pages, but it would be great to have it in all project - related pages (wiki, noews ... etc).</p> <p>It would allow to distinct rendering of the same part of screen in different projects using custom CSS files.</p> <p>Concrete use case is that we have UAT (acceptance testing) subprojects of each project, that are targeted to end users with minimal computer experiences. We allow only single tracker in this project (UAT_bug) and want to hide all page elements that are not absolutely necessary to make this page as simple as possible.</p> <p>Since we use Redmine for lots of different project types and project-specific settings are limited, it is not so easy to configure the look of the issue page in each project differently. I guess this would be a way to achieve this.</p> <p>Another way (maybe better) would be to add an additional field to project settings (let's say "Project category" that's value (if set) would be passed to the CSS class. But in this case I still would put there the project ID.</p>

Also it would be great to add CSS class about tracker and perhaps about issue status into both "static" and "dynamic" part of issue screen. "Static" part means that which is shown only (and cannot be changed), "dynamic" part means the form for issue editing.

You can achieve this by adding just one line here: [source/trunk/app/helpers/application\\_helper.rb#L491](https://source.trunk.app/helpers/application_helper.rb#L491)

For example replace:

```
def body_css_classes
  css = []
  if theme = Redmine::Themes.theme(Setting.ui_theme)
    css << 'theme-' + theme.name
  end

  css << 'controller-' + controller_name
  css << 'action-' + action_name
  css.join(' ')
end
```

with this:

```
def body_css_classes
  css = []
  if theme = Redmine::Themes.theme(Setting.ui_theme)
    css << 'theme-' + theme.name
  end

  css << 'project-'+@project.identifier if @project
  css << 'controller-' + controller_name
  css << 'action-' + action_name
  css.join(' ')
end
```

Please note:

```
css << 'project-'+@project.identifier if @project
```

Best regards,  
Daniel

- *Category set to UI*
- *Status changed from New to Closed*

This has been implemented with [r12170](#) ([#14767](#)).

body now includes the project *identifier*, prepended with project-, when you are navigating a project view. So for a project with an identifier ecookbook the CSS style would be body.project-ecookbook.
