

Redmine - Defect #1525

Link to view specific revision fails with Subversion Repository subdirectory

2008-06-24 23:30 - Roger Hunwicks

Status:	Closed	Start date:	2008-06-24
Priority:	Normal	Due date:	
Assignee:		% Done:	0%
Category:	SCM	Estimated time:	0.00 hour
Target version:	0.8	Affected version:	
Resolution:	Fixed		
Description			
MySQL 5.0.22 ruby 1.8.5 Rails 2.0.2 Redmine r1583 svn 1.4.2			
Our svn repository is accessed via a subdirectory, e.g http://server/svn/project .			
When looking at a changeset, e.g. https://server/redmine/repositories/revision/project/126 the individual files are listed. The filename is a link to view the specific revision of the file committed in that changeset, e.g. https://server/redmine/repositories/entry/project/*trunk/directory/file.ext?rev=126 .			
Notice that the link contains // between the project and the start of the path to the file. Clicking this link gives "he entry or revision was not found in the repository".			
If I manually correct the link to remove the second / the link works correctly.			
Note that other errors have been reported and fixed relating to the View Differences links on this page when accessing a Subversion repository in a subdirectory, but this is for the link from the actual filename to see that revision without any diffs.			
Thanks			
Roger

Revision 1587 - 2008-06-26 19:02 - Jean-Philippe Lang

Link to view specific file on revision view fails with Subversion repository subdirectory (#1525).

History

#1 - 2008-06-25 13:39 - Paul Rivier

I had some troubles with slashes as well when developing the Filesystem connector. As a workaround, I use some helpers to ensure slashes are not duplicated (see `format_path_ends` in `filesystem_adapter.rb`). If bug is confirmed, and the fix needs such a function, it may be worth to move the definition in a shared place.

#2 - 2008-06-26 19:02 - Jean-Philippe Lang

- Status changed from New to Closed

- Target version set to 0.8

- Resolution set to Fixed

Fixed in [r1587](#).
