

Redmine - Patch #15785

Support more character encodings in incoming emails

2013-12-30 10:34 - Felix Schäfer

Status:	Closed	Start date:	
Priority:	Normal	Due date:	
Assignee:		% Done:	0%
Category:	Email receiving	Estimated time:	0.00 hour
Target version:	2.5.0		
Description			
<p>The MailHandler currently tries to convert the encoding of the body of incoming emails to UTF-8 by directly passing the charset of the email body to Redmine::CodesetUtil.to_utf8, see source:/trunk/app/models/mail_handler.rb@12473#L413. Redmine::CodesetUtil.to_utf8 in turn only handles encodings known to Ruby (on 1.9+), which might not be the case for the charset of an incoming email.</p> <p>Planio recently had the case of a user sending emails in Korean with the charset ks_c_5601-1987, which Ruby doesn't know about. This can be mitigated thanks to Mail::RubyVer.pick_encoding which will try to pick a Ruby encoding compatible with the charset of the email (Mail::RubyVer is a wrapper for the correct functions for the current Ruby version).</p> <p>I will post a patch for this shortly.</p>

support more character encoding in incoming emails (#15785)

Supporting encodings of iconv on Ruby 1.8 depend on iconv implementation. glibc-common-2.12-1.132 on CentOS6 does not support ks_c_5601-1987.

Contributed by Felix Schäfer.

- File 15785.patch added

Here is the patch with a test.

#2 - 2013-12-30 11:37 - Jan from Planio www.plan.io

- Status changed from New to Confirmed

- Target version set to Candidate for next minor release

#3 - 2013-12-30 11:42 - Jan from Planio www.plan.io

- Tracker changed from Defect to Patch

#4 - 2013-12-31 08:48 - Toshi MARUYAMA

This patch looks good.

But, Korean encoding detection is in mail 2.5.4.

<https://github.com/mike/mail/commit/88457e66ec5b298bd198b5c3b6739f05320a16ee>

Many users posted that mail 2.5.4 has trouble on redmine.org. For test passes, we need to restrict mail 2.5.4 in Gemfile.

<https://github.com/mikel/mail/commit/88457e66ec5b298bd198b5c3b6739f05320a16ee>

This means in mail 2.5.4, not in mail 2.5.3.

#6 - 2013-12-31 09:00 - Toshi MARUYAMA

It seems Mail::VERSION returns mail version.

<https://github.com/mikel/mail/blob/2-5-stable/lib/mail/version.rb>

#7 - 2013-12-31 14:28 - Felix Schäfer

Mail::VERSION.version returns the version of the Mail gem indeed.

I know korean would only work with Mail 2.5.4, and we don't mind requiring it in the Planio Gemfiles to make sure it is supported for us. I think the patch is useful even with earlier versions of the Mail gem, as Mail::RubyVer.pick_encoding is available in earlier versions too and still adds more supported encodings. I agree with you that the test I've written would require Mail 2.5.4 though, you are right.

Should I write a new test that makes sure that the patch works but doesn't require 2.5.4?

Furthermore, what type of errors do users encounter with Mail 2.5.4?

#8 - 2014-01-01 06:48 - Toshi MARUYAMA

- Subject changed from *Support more charsets in incoming emails* to *Support more charctor encoding in incoming emails*

See [#13698](#).

But Rails 3.2.16 requires mail 2.5.4 or higher.

<https://github.com/rails/rails/blame/v3.2.16/actionmailer/actionmailer.gemspec#L23>

#12 - 2014-01-01 08:48 - Toshi MARUYAMA

- Target version changed from *Candidate for next minor release* to *2.5.0*

#13 - 2014-01-06 05:31 - Toshi MARUYAMA

- Status changed from *Confirmed* to *Closed*

Committed in trunk [r12474](#) and tests pass, thanks.

#14 - 2014-01-06 08:44 - Felix Schäfer

Great to hear, thanks!

#15 - 2014-01-22 10:12 - Anton Nepomnyaschih

Is it duplicate for [#14675](#) ? Can we update our Redmine and get the Defect fixed? =)

#16 - 2014-02-17 12:13 - Toshi MARUYAMA

- Has duplicate Defect [#14675](#): *redmine:email:receive_imap failed with localizaed characters in mail body added*

#17 - 2014-02-17 12:14 - Toshi MARUYAMA
