Description	
<p>It would be great, if one could chose by the url to request only part of the html page.</p> <p>Like a rest request I am only interested in displaying the issues info card (including everything like the normal web frontend) but without main menu and page header.</p> <p>Maybe there is a way to configure what to display:</p> <ul style="list-style-type: none">• Main Menu• Header/ Logo / prject name and path / search• Activity, roadmap, issues, ..., config panel <p>The reason is to display the issue in a small environment included in a delphi program which automates some parts.</p> <p>Best regards Christian</p>
