

Redmine - Defect #16036

wiki edit pencil links are sometimes missing, throwing off the other pencil edit links

2014-02-06 00:22 - Domingo Galdos

Status:	New	Start date:	
Priority:	Normal	Due date:

Target version:		Affected version:	
Resolution:			
Description			
This is similar to #11789 -- some sections have their pencil icon missing, but the count continues regardless. On a large page this sometimes happens many times which means that by the time you're halfway through the doc the pencils are basically useless. In fact the pencils have become mostly useless on our wiki due to this issue. I observe it with h6, possibly with some others. Not sure of the exact pattern to it, but I am able to reliably reproduce it @ http://demo.redmine.org/projects/testproj1/wiki/Wiki/3 as well as on our own installation which uses the following (not that it's too relevant since it's easily reproducible on the redmine demo wiki which I assume is up to date) Environment: Redmine version2.4.1.stable Ruby version2.0.0-p353 (2013-11-22) [x86_64-linux] Rails version3.2.15 Environmentproduction Database adapterMysql2 Here's a copy of the repro text on the wiki link above in case it gets removed or something h1. Wiki hi h2. h2 hi h5. CI Nickname: * Monitored * Notification * Notification G * Checks h6. Check * CI * Interval * Submit * Instance * Check This means: every longer existing. If the be sent. h3. h3 hi h4. h4 hi

I believe that at least one cause of this is if you have preformatted text that would normally get an "edit pencil".

E.g. (assuming Markdown text):

```
# Header 1 gets a pencil
``
# Here's a comment in a bash script.
...bash script here
``
# Header 2 gets a pencil, but it points to the comment in the bash script, because the pencil edits starting from the second hash mark.
```
