

Redmine - Defect #16369

Problem running on Tomcat

2014-03-17 17:39 - Reidar M. Tronstad

Status:	Closed	Start date:	
Priority:	Normal	Due date:	
Assignee:		% Done:	0%
Category:	Performance	Estimated time:	0.00 hour
Target version:		Affected version:	2.5.0
Resolution:	Wont fix		

Description

We have used Redmine for several years now with great success.

Setting up a new server I installed Redmine on Tomcat. We are using the Apache WEB server as front-end with the jk Apache Tomcat Connector to simplify the configuration.

The problem we have encountered is that the Redmine performance deteriorate with time (just a few hours use) and accessing issues results randomly in Internal error 500.

There is no trace of the error in the Tomcat log files.

Is Redmine known to be running stable on jruby Tomcat?

Our installation:

```
OS      OpensUSE 13.1 x86_64
Tomcat  7.0.50
Java    1.7.0_51-b13
```

```
RAILS_ENV=production script/about
../redmine-2.5.0/lib/redmine.rb:71 warning: already initialized constant FCSV
```

Environment:

```
Redmine version      2.5.0.stable
Ruby version         1.9.3-p392 (2014-01-09) [java]
Rails version        3.2.17
Environment          production
Database adapter     MySQL
```

SCM:

```
Subversion           1.8.8
Filesystem
```

Redmine plugins:

```
no plugin installed
```

production:

```
adapter: mysql2
database: redmine
host: localhost
username: redmine
password: "****"
encoding: utf8
```

History

#1 - 2018-10-07 01:47 - Go MAEDA

- Status changed from New to Closed

- Resolution set to Wont fix

Redmine 3.0 and later does not support JRuby.
