

Redmine - Defect #17316

New repositories can't be cloned.

2014-06-26 14:36 - Elvys Melo Duarte Almeida

Status:	Closed	Start date:	
Priority:	Normal	Due date:	
Assignee:		% Done:	0%
Category:	SCM	Estimated time:	0.00 hour
Target version:		Affected version:	
Resolution:	Invalid		
<p>Description</p> <p>We have observed since a few month that new created repos can't be cloned.</p> <p>When new repository are created redmine shows the warning:</p> <pre>Redmine based authentication can not be used with this repository name.</pre> <p>A look to the repos-folder shows that the repos were created and they are bare.</p> <p>Trying to clone these repos causes the tortoise-git message</p> <pre>Cloning into 'XXX\Desktop\asdf'... fatal: Authentication failed for 'http://YYY.local/git/asdf.git/' git did not exit cleanly (exit code 128) (8409 ms @ 26.06.2014 14:24:37)</pre> <p>Cloning older repos works fine.</p> <p>We have copied the content of the older hooks-repos (.git/hooks) in the folder of the newer repos and we have seen that after that the cloning works.</p> <p>Because everything went well, we didn't change nothing, so we don't understand where the problem is coming from.</p> <p>More information: Machine where the close has to be done: Win7pro 64bit Server where the repos are located: OpenSuse 11.4 (i586)</p>			

History

#1 - 2014-06-26 14:59 - Toshi MARUYAMA

- Status changed from New to Closed
- Resolution set to Invalid
