#### Description

We have observed since a few month that new created repos can't be cloned.

When new repository are created redmine shows the warning:

```
Redmine based authentication can not be used with this repository name.
```

A look to the repos-folder shows that the repos were created and they are bare.

Trying to clone these repos causes the tortoise-git message

```
Cloning into 'XXX\Desktop\asdf'...
fatal: Authentication failed for 'http://YYY.local/git/asdf.git/'

git did not exit cleanly (exit code 128) (8409 ms @ 26.06.2014 14:24:37)
```

Cloning older repos works fine.

We have copied the content of the older hooks-repos (.git/hooks) in the folder of the newer repos and we have seen that after that the cloning works.

Because everything went well, we didn't change nothing, so we don't understand where the problem is coming from.

More information:

Machine where the close has to be done: Win7pro 64bit

Server where the repos are located: OpenSuse 11.4 (i586)

#### History

##### #1 - 2014-06-26 14:59 - Toshi MARUYAMA

- Status changed from New to Closed

- Resolution set to Invalid
