Why remove the 'FileReader' in window test?

#4 - 2014-09-01 10:31 - Toshi MARUYAMA

fred, could you give us the answer?

#5 - 2014-09-05 22:40 - fred bregar

FileReader is not needed. (Search repo for FileReader)

Checking for FileReader was simply a hack for Safari 5.1 to return false. FileReader is for actually reading a file in a browser (like dragging a text file into the browser and creating a <textarea> tag and displaying contents of the file). Redmine is not reading the contents of the File, just uploading it.

a better test would be:

```
if ($.ajaxSettings.xhr().upload && inputEl.files)
//but this instantiates a new XMLHttpRequest object and does nothing with it.
```

but like i said (#13932-13) the real problem is jQuery. jQuery *was* amazing, but unless you need to support IE8 and below there is really no need for it these days.

#6 - 2014-09-14 19:32 - Toshi MARUYAMA

- Status changed from New to Closed

- Resolution set to Fixed

Committed in trunk, 2.5-stable and 2.4-stable, thanks.
