Redmine - Feature #17642

Provide a QR Code of the API key to auto log-in with mobile apps

2014-08-09 13:32 - Yehuda Deutsch

Target version:				
Resolution:				

Description

Current process:

- User logs in
- Accesses its page
- Opens the mobile app
- Enters the instance's URL
- Enters the API key

The last two steps are to enter long strings manually, the last one is entirely a non-intuitively string.

Proposed process:

- User logs in
- Accesses its page
- Opens mobile app
- Scans the QR Code (containing both the URL and API Key)

The QR Code should be accessible after clicking "Show" just like it is now.
I attached a screenshot of how I think it should be.
