Description

Hi

Could custom related issue types be loaded (or even just description field?), or if it would clash with the existing related issue functionality, have a new section to show issue relationships where you could load relationship strings like in a graph database?

Also could they be sorted and spaced out like in the following:

type1 ....
type1 ....
type1 ....

type2 ....
type2 ....
type2 ....

or if it would be cleaner to show as:

type1
....
....
....

type2
....
....
....

Thanks
