

Redmine - Defect #18355

Missing CSS class 'tabular'

2014-11-16 16:10 - Filou Centrinov

Status:	New	Start date:	
Priority:	Normal	Due date:	
Assignee:		% Done:	0%
Category:	UI	Estimated time:	0.00 hour
Target version:		Affected version:	2.6.0
Resolution:			
Description			
There is an inconsequence usage of class 'tabular' on /my/account. One fieldset has no 'tabular' class.			
<pre><div class="splitcontentleft"> <fieldset class="box tabular"> </div> <div class="splitcontentright"> <fieldset class="box"> <fieldset class="box tabular"> </div></pre>			
Edit: The same on the page "New issue". Not every fieldset has the class 'tabular'.

- Category changed from My page to UI

I think it is not a problem. Adding "tabular" class to the Email notification box will break the layout.
