Resolution:	Duplicate		
Description			
<p>I see various issues\features in redmine bts, but none of them match my goal. I have a redmine installation that serves both the developer teams (2 different agile team) and some customers. Using both native visibility workflow in redmine and after creates some custom plugin I can control with great granularity visibility\mandatory field on developer side and on customer side for all projects. I have encountered only one problem and this is related to roadmap management: I have multi-projects shared version, because I use version to define sprint and project-backlog. The problem I have encountered is that also if I can hide private bug of projects to my customers, I cannot hide the shared roadmap. This for me is a defect because redmine should be more, natively, more scrum oriented. (I see a lot of plugins but none of them match my requirement)</p> <p>Thanks in advance.</p>
