- Status changed from Closed to Reopened

Nice, and how can I get Redmine working ?

Any clue ?

Seriously closed the issue like this without a word. Thanks a lot, very helpful...

#3 - 2015-01-28 12:59 - chamie chamie

It's an issue about lack of documentation.

Please explicite, which version of Ruby and Rails we should use, and also which repository we have to use in order to have it work.

The Ruby and Rails version that should be used is defined in the Redmine Gemfile (at the very top of the file). The appropriate version is installed when running `bundle install` so you shouldn't have to worry about that.

We're not managing any debian repository or Redmine package. If you're having trouble with Redmine packages, maybe you should try to install it from source as explained in [RedmineInstall](#). Sorry but I'll have to close this, as we do not provide technical support in the issue tracker. We only track issues about the Redmine core software here.
