Category: Custom fields	Estimated time: 0.00 hour
Target version:	
Resolution:	
Description It would be really great to add option (and role premission?) that will allow users edit list values of a custom field "list" just in the same way, as categories can be added by users from issue view (now can be list edited only by admin in custom fuelld config).

Need this feature too.

I need each project-admin to be able to edit some fields because some of them may have to be changed often. We don't want the Administrator to be spammed for changing value of custom fields.

It would be great that we can add fields like "Category" .

Hi

I have just finished the first version of a plugin to enable user-editing of Custom Fields.

Please have a look at https://www.redmine.org/plugins/redmine_edit_custom_fields

Features:

- Allows editing of all Issue Custom Fields for a project
- Provides new role permission
- Provides new module permission

Still missing:

- Add field in Custom Fields configuration to make only certain Custom Fields user editable
- Add a select box to choose which Custom Field to edit

Best regards
Frederick Thomssen

Hi. Can you make this compatible for redmine 4.1?
