Resolution:	Invalid		
Description			
Hello,			
I make this tutorial :			
https://jbox-web.github.io/redmine_git_hosting/howtos/install/#step-by-step-installation			
1. Install gems and migrate database			
<pre>redmine\$ cd REDMINE_ROOT redmine\$ bundle install --without development test</pre>			
I have a problème with the last the last commande. I try to remove /opt/redmine/GemFile.locke, I install the gem rake 1.6.0 and rake 1.4.1, actionpack, i test with rails 3.2.21, but without success, so I execute 'gem clean'.			
But i have this error :			
<pre>Updating https://github.com/jbox-web/gitolite-rugged.git Updating https://github.com/jbox-web/grack.git Fetching gem metadata from https://rubygems.org/..... Fetching version metadata from https://rubygems.org/.. Resolving dependencies..... Bundler could not find compatible versions for gem "rack": In Gemfile: gitlab-grack (>= 0) ruby depends on rack (~> 1.4.1) ruby rails (= 4.2.0) ruby depends on actionpack (= 4.2.0) ruby depends on rack (1.6.0)</pre>			
Have someone got an idea? I searched a lot...I'm under Debian.

Description

Hello,

I make this tutorial :

https://jbox-web.github.io/redmine_git_hosting/howtos/install/#step-by-step-installation

Install gems and migrate database

```
redmine$ cd REDMINE_ROOT
redmine$ bundle install --without development test
```

I have a problème with the last the last commande. I try to remove /opt/redmine/GemFile.locke, I install the gem rake 1.6.0 and rake 1.4.1, actionpack, i test with rails 3.2.21, but without success, so I execute 'gem clean'.

But i have this error :

Updating <https://github.com/jbox-web/gitolite-rugged.git>

Updating <https://github.com/jbox-web/grack.git>

Fetching gem metadata from <https://rubygems.org/>.....

Fetching version metadata from <https://rubygems.org/>..

Resolving dependencies.....

Bundler could not find compatible versions for gem "rack":

In Gemfile:

gitlab-grack (>= 0) ruby depends on

rack (~> 1.4.1) ruby

rails (= 4.2.0) ruby depends on

actionpack (= 4.2.0) ruby depends on

rack (1.6.0)

Have someone got an idea? I searched a lot...I'm under Debian.
